

CLEANER +

DIESEL AND DOMESTIC FUEL CLEANER - SOLUBILISING AGENT - DECONTAMINANT

DESCRIPTION :

CLEANER + cleans and disinfects fuel tanks soiled by sludge and bacteria. It gives fuel excellent combustion capacities and eliminates clogging on filters and the complete carburettor system. Using CLEANER + is essential for the boiler in your domestic fuel installation to be able to perform optimally. Contaminated fuel gives rise to large numbers of breakdowns and enormous maintenance costs.

METHOD OF USE :

IN STORAGE TANKS :

Mix CLEANER + with 50 L of diesel and spray onto contaminated sludge.

WARNING :

The bottom of a tank containing of 1cm of contaminated sludge will need to be pumped clean after spraying the solution.

After pumping, the operation should be repeated by mixing 1 L of CLEANER + in the diesel to be stored in the tank. To avoid deposits and contaminating tanks, we recommend regular use of our ENGINE KLEEN OUT reference in a mix of 1 L for 2000 L of diesel and CLEANER + once a year.

IN VEHICLE TANKS :

Mix CLEANER + with 20 L of diesel, pour the solution in the tank, contaminated sludge can be recovered if considered to be excessive even if cleaning or decontaminating operations have never been carried out. In all other cases, the solution will enable waste to be dissolved and it will kill bacteria, and after the tank has been filled solubilised diesel will be used.

If pumping proves to be necessary, a complete decontamination operation will be required: mix 1 L of CLEANER + in 20 L of diesel. Pour in the solution, leave to act for an hour and then fill up your tank.

PRECAUTIONS :

Use biocides with precautions. Before use, read the label and information concerning the product. Biocides are considered as hazardous. Respect the precautions of use and safety instructions.

- Product for professional use. Consult MSDS (upon request only).
